

ComplianceConsole

ComplianceConsole is an industry-leading software asset management (SAM) platform that provides a centralised view of an organisation's entire software estate, enabling the rapid reconciliation of software against licence entitlement records.

It provides customers with visibility, business intelligence and control over software and licensing in today's complex multi-vendor environment, as well as a mechanism for ongoing management.

Business Benefits

Reduce licensing costs

Drive down licensing costs by up to 30% with a structured approach to software. With an average payback period of less than three months, ComplianceConsole allows businesses to rapidly identify what software they have, prevents unnecessary licence purchases, and enables unused licences to be redistributed accordingly.

Simplify vendor audits

Mitigate risk and protect against costly and disruptive vendor audits by establishing and maintaining an accurate compliance position.

Strengthen your contract negotiation position

Negotiate with vendors from a position of strength by demonstrating a comprehensive knowledge of the software estate, and how it is applied and managed. Advanced contract management combined with advanced reporting simplifies renewals.

Greater accountability

Manage entitlements and assign costs to regions or business units, and report compliance by vendor across any hierarchy of users.

What Makes ComplianceConsole Different?

Hosted solution

ComplianceConsole is a Software as a Service (SaaS) solution designed in-house by leading software experts. This means there are no additional infrastructure costs and results can be achieved quickly, and without large-scale investment.

Integrates with existing inventory tools

ComplianceConsole integrates with all major inventory tools such as SCCM, Centennial and Altiris, removing the need to replace existing on-premise solutions and accelerating the time taken to achieve results.

Automated reconciliation of licence intelligence

A powerful rules engine automatically calculates the compliance position based on licence agreements. Upgrades and downgrades are applied intelligently, enabling greater purchasing efficiency and maximising return on investment.

Centralised view and customised reporting

Easy-to-use, configurable dashboards provide a consolidated view of an organisation's environment, highlighting areas of under/over-licensing and associated cost, including savings achieved. Reporting can be customised to meet the requirements of stakeholders, and compliance managed by location or cost centre.

Proven multi-vendor capability

ComplianceConsole is optimised to support compliance in complex multi-vendor environments including Adobe, Microsoft, IBM, Oracle, SAP and Symantec.

About Concorde

Concorde combines innovative technology with years of customer experience to enable organisations to manage the cost and value of software, and adopt software strategies that meet business needs and keep pace with change.

With our solutions and services, organisations know what software they have, how much it costs, how they consume it, and the value that it is delivering to their business.
